

Organizational Health Literacy: the concept, the progress and examples from the field

Allianz Gesundheits Kompetenz
Symposium 2019
Berne Switzerland 2019

Prof. Diane Levin-Zamir, PhD, MPH, MCHES

Director, National Department of Health Promotion

Clalit Health Services, Israel

University of Haifa – School of Public Health, Israel

Chair – National Council on Health Promotion, Israel Ministry of Health

IUHPE –Global Working Group Health Literacy

Presentation Outline

- Health literacy – working definitions
- Organizational health literacy – the rationale and the concept
- Digital Health literacy – definition and measures and why is it important?
- Practical examples from the field
- Innovative opportunities for change
- Conclusions
- The call for future research

Health literacy - definitions

Health literacy refers, broadly, to the ability of individuals to “gain access to, understand and use information in ways which promote and maintain good health”.

WHO, 1998

Health literacy - definitions

The HLS-EU comprehensive, integrated definition of the evolving concept of health literacy

“Health literacy is linked to literacy and it entails people’s knowledge, motivation and competencies:

- to access, understand, appraise and apply information
- to take decisions in everyday life
- in terms of healthcare, disease prevention and health promotion
- to maintain and improve quality of life during the life course.”

Sørensen, Kristine, et al. 2012. “Health literacy and public health: A systematic review and integration of definitions and models.” BMC Public Health, 12:80. doi: 10.1186/1471-2458-12-80

Health Literacy Typology

- *Functional* - Communication of Information
- *Interactive* - Personal Skills
- *Critical* - Community Empowerment

Background

- **The evidence base for health literacy:** low health literacy is significantly associated with poorer health status, less adherence to medical recommendations, less use of preventive services, and early mortality.
- Most of the research has focused on **functional health literacy**, and has been conducted among **special populations**.
- **National data**, based on measuring health literacy according to the broad sense of the concept, is essential for health promotion planning, particularly when **developing health literate organizations**.

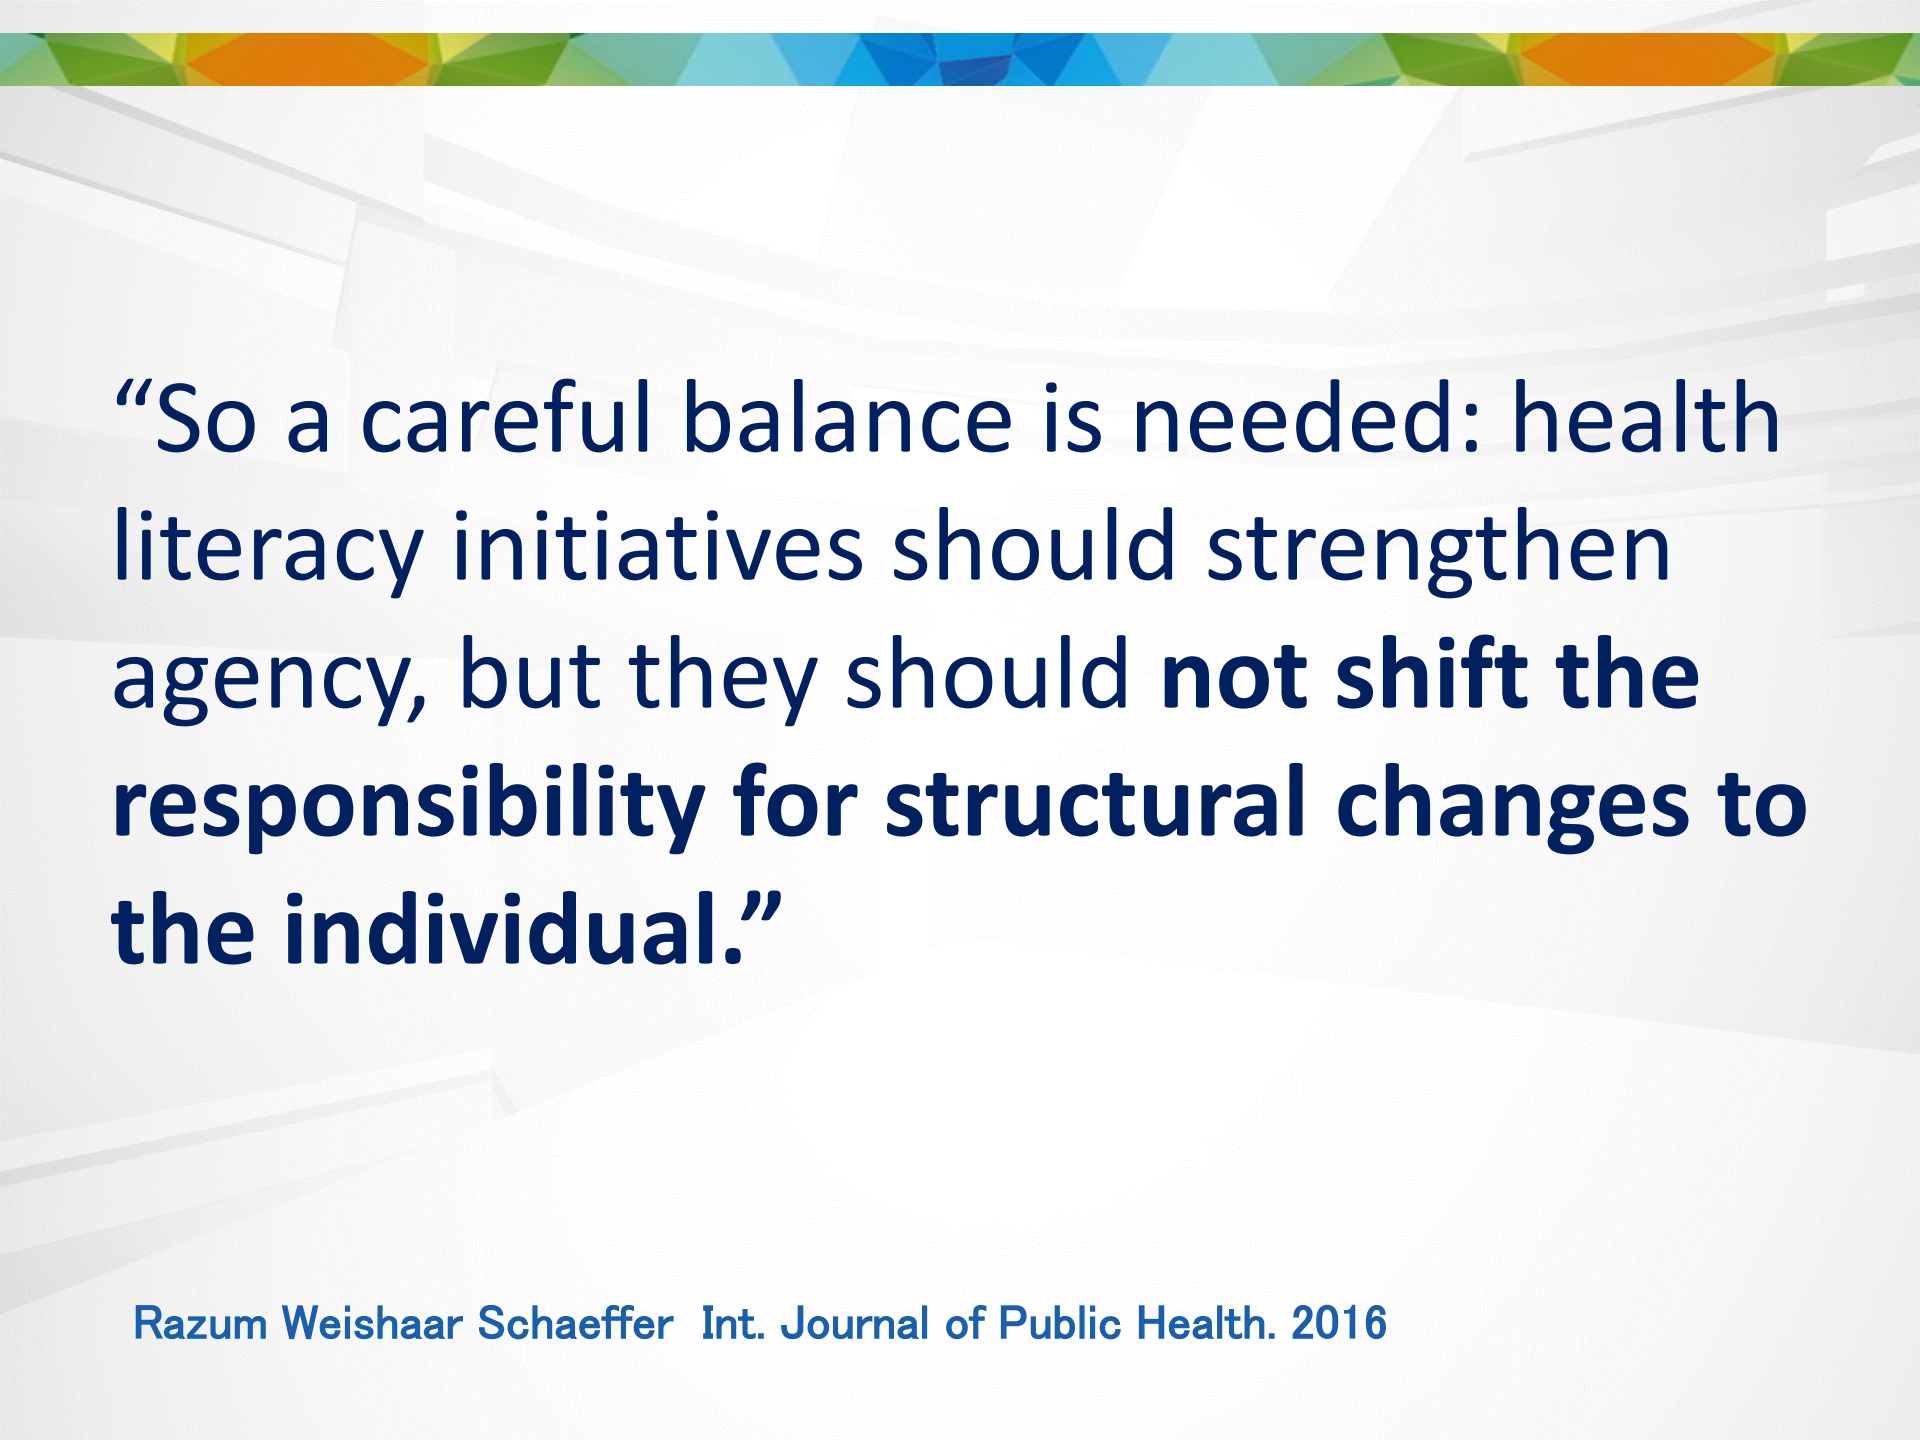

Low health literacy is recognized as a strong contributor to health inequalities

Background (cont'd)

..... growing calls to ensure that health literacy not be framed as the sole responsibility of individuals, but that **equal attention be given to ensure that governments and health systems** present clear, accurate, appropriate and accessible information for diverse audiences.

Rudd, Rima E. 2015. “The evolving concept of Health literacy: New directions for health literacy studies.” *Journal of Communication in Healthcare*, 8 (1): 7–9.

“So a careful balance is needed: health literacy initiatives should strengthen agency, but they should **not shift the responsibility for structural changes to the individual.**”

Health literacy responsiveness

Describes the way in which services, organizations and systems make health information and resources available and accessible to people according to health literacy strengths and limitations

Brach C, Keller D, Hernandez LM, Baur C, Dreyer B, Schyve P, Lemerise AJ, et al. Ten attributes of health literate health care organizations. Washington, DC: Institute of Medicine of the National Academies; 2012 Jun.

Universal Precautions or Personalization?

Our Mission...

This graphic reflects the views of the authors of the Discussion Paper "Ten Attributes of Health Literate Health Care Organizations" and not necessarily of the authors' organizations or of the IOM. The paper has not been subjected to the review procedures of the IOM and is not a report of the IOM or of the National Research Council.

Attributes of a Health Literate Organization

- Ensures easy access to health information
- Prepares workforce
- Targets high risk situations
- Promotes Leadership
- Communicates effectively
- Designs easy to use materials
- Meets needs of all – avoiding stigmatization
- Explains coverage and costs
- Includes consumers
- ***Plans, evaluates and improves***

Standards 1-4 with Sub-Standards

Standard 1:

Implement organizational health literacy best-practices across all structures and processes of the organization.

Sub-Standard 1.1 The leadership / management of the organization is committed to monitoring and improving organizational health literacy.

Sub-Standard 1.2 The organization makes organizational health literacy an organizational priority and secures adequate infrastructures and resources for implementing it.

Sub-Standard 1.3 The organization ensures the quality of organizational health literacy interventions by quality management.

Standard 2:

Develop documents, materials and services with stakeholders in a participatory manner.

Sub-Standard 2.1 The organization involves patients in the development and evaluation of patient-oriented documents, materials and services.

Sub-Standard 2.2 The organization involves staff in the development and evaluation of staff oriented documents, materials and services.

Standard 3:

Enable and train staff for personal and organizational health literacy.

Sub-Standard 3.1 Personal and organizational health literacy is understood as an essential professional competence for all staff working in the organization.

Standard 4:

Provide and support easy navigation and access to documents materials and services.

Sub-Standard 4.1 The organization enables first contact via user friendly website and phone.

Sub-Standard 4.2 The organization provides information necessary for patients and visitors for getting to the hospital.

Sub-Standard 4.3 Support is available to help patients and visitors to navigate the hospital.

Sub-Standard 4.4 Health information for patients and visitors is available for free.

Standards 5-8 with Sub-Standards

Standard 5:

Apply health literacy best-practices in all forms of communication with patients.

Sub-Standard 5.1 Spoken communication with patients is of high quality and easy-to-understand.

Sub-Standard 5.2 Written materials are of high quality, easily accessible, and easy-to-understand.

Sub-Standard 5.3 Digital services and new media are of high quality, easily accessible, and easy-to-use.

Sub-Standard 5.4 Information and communication is offered in the languages of relevant patient groups by specific, trained personnel and for all provided materials.

Sub-Standard 5.5 Communication which is easy-to-understand and to act on, especially in high-risk situations, is accepted as a necessary safety measure.

Standard 6:

Promote personal health literacy of patients and relatives beyond discharge.

Sub-Standard 6.1 The organization supports patients in improving health literacy with regard to disease-specific self-management.

Sub-Standard 6.2 The organization supports patients in improving health literacy with regard to development of more healthy lifestyles.

Sub-Standard 6.3 Upon discharge, patients are well informed about their future treatment and recuperation process.

Standard 7:

Promote personal health literacy of staff with regard to occupational risks and personal lifestyles.

Sub-Standard 7.1 The organization supports staff in improving their health literacy for self-management of occupational health and safety risks and of healthy life-styles.

Standard 8:

Contribute to promoting personal and organizational health literacy in the region.

Sub-Standard 8.1 The organization contributes to the improvement of personal health literacy of the local population.

Sub-Standard 8.2 The organization supports the dissemination and further development of organizational health literacy in the region and beyond.

Clalit Health Services

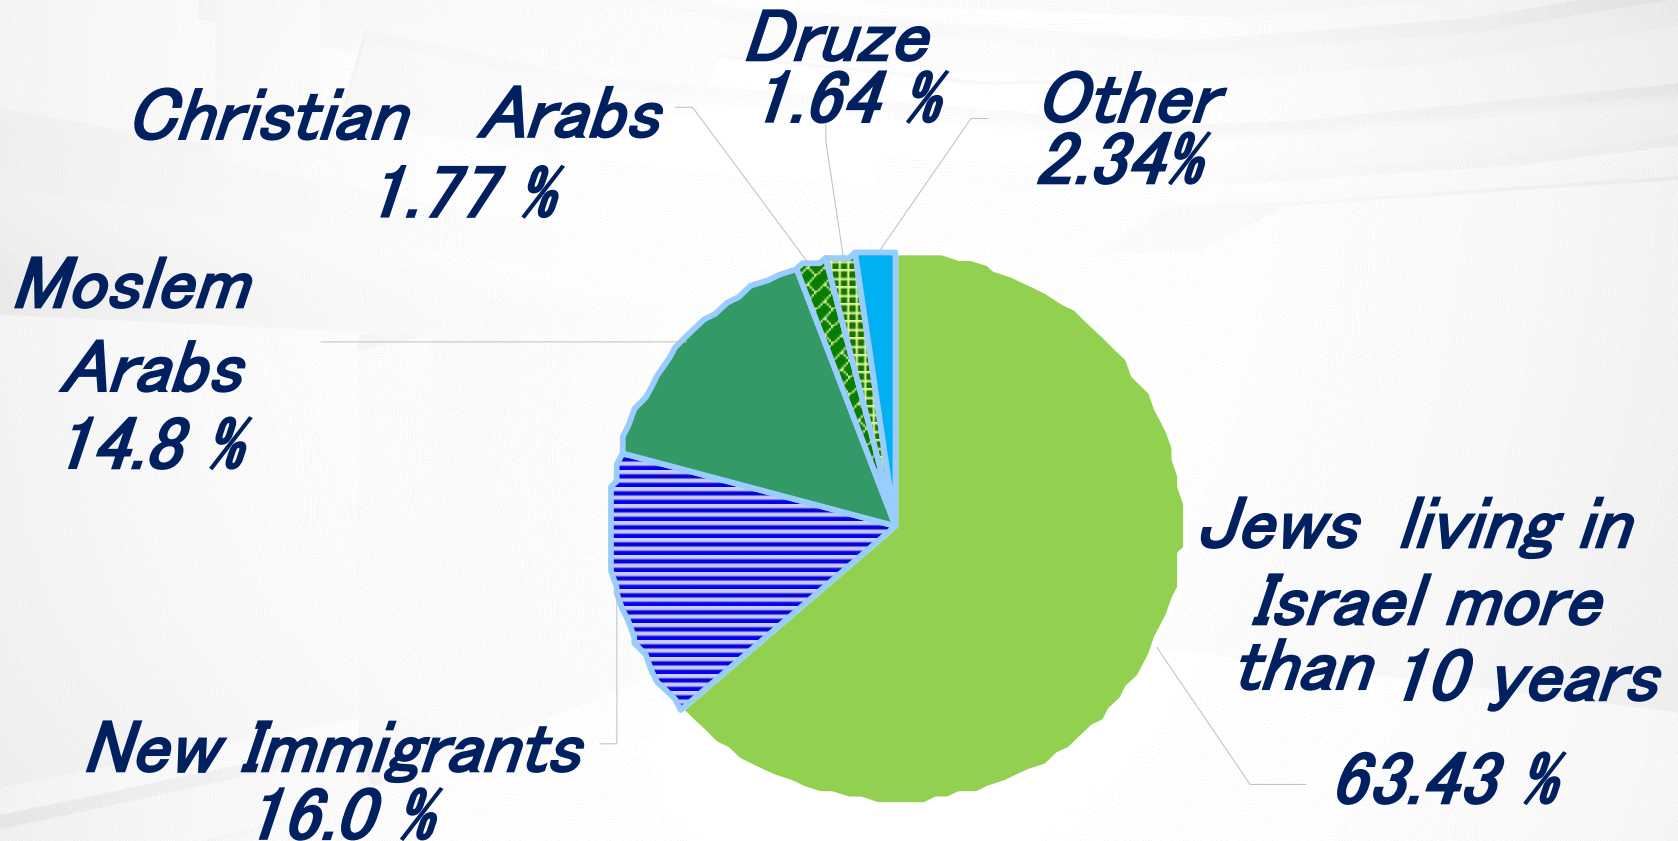

- 4.5 million members; 54% of Israel's population
- Over 45,000 workers
- 1,450 primary and specialized care community clinics
- 14 major teaching hospitals: 8 general, 2 psychiatric, 1 pediatric, 2 geriatric, 1 rehabilitation
- 416 pharmacies
- 40 diagnostic imaging centers
- 67 laboratory centers
- 83 physiotherapy units
- 30 occupational therapy units
- 87 diet & nutrition consultation units
- 22 mental health clinics, 70 dental clinics
- 20 alternative medicine clinics

הגמשת מפרק הכתף

טיפ ספטמבר

מומלץ לשלב תנועה גופנית בחיי היומיום

- להשתמש במדרגות במקום במעלית, במיילת הסופר.
- הרוח את רכבכם במרחק מסיכון.
- פאוסים קצרים כל 15-20 דקות.
- כאשר אתם עובדים, יוצאים, יורד חשמל, לפני או אחרי תחנת העברת ולכן ברגל.
- השתדלו ליהנות מהתנועה לעשות את הנושאים הבאים:

1. עמודי שדרה ישרים

2. מרחק רגליים זהה לרוחב הכתפיים

התרגיל מתאים למבוגרים ואלו עם בעיות מפרקי הכתף. יש להימנע מלעשות תנועות חזקות מדי.

תמורות
תכנית להגברת
היצמדות והתמדה
לאורח חיים בריא
ולטיפול תרופתי בסוכרת

Aim of the study

To examine the effect of motivational SMS on diabetes control and clinical measures related to the diabetes, as well on self-perceived outcomes.

Methods

- **Study population:** 80 men and women ages 30-70 with uncontrolled diabetes, who use routinely use mobile phone text messages.
- A pool of **150 text messages** were developed by an inter-disciplinary team: based on the Trans Theoretical Model of health behavior applied to on nutrition, physical activity, smoking, foot health, medication taking, examination follow-up
- 50 participants **received a daily SMS**, for 3 months, and an SMS every 2nd day in the next 3 months.
- Routine clinic visits continued in study period

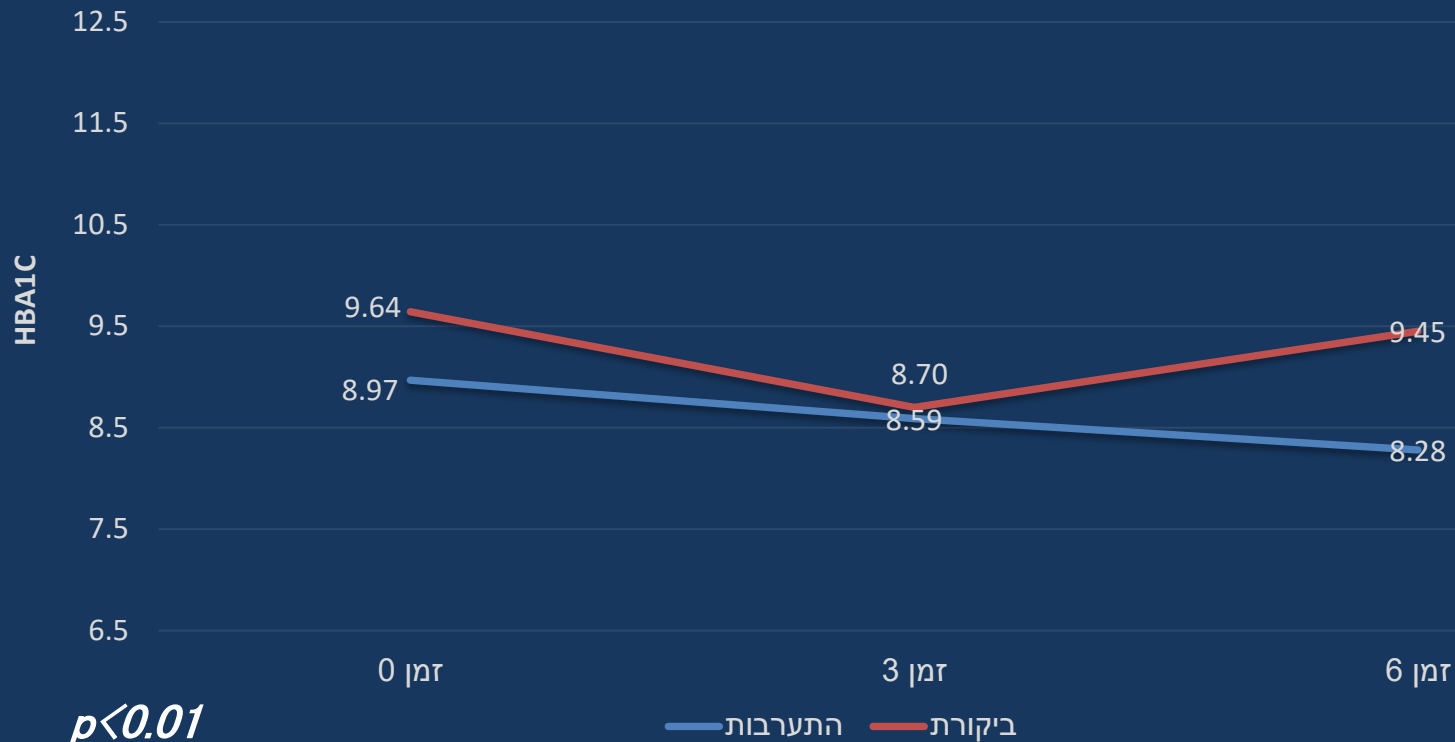

Study Measures

- Data collection was conducted at 3 time points: before intervention, 3 & 6 months after;
- **Baseline measures:** health literacy,
- **Clinical measures:** HbA1c, LDL, BMI, blood pressure
- **Self-reported measures:** QoL, self-efficacy, patient-perceived difficulties in diabetes treatment, medications adherence
- Statistical analysis was performed using a step-wise regression model.

Ishikawa H, Takeuchi T, Yano E. Measuring functional, communicative, and critical health literacy among diabetic patients. *Diabetes Care*. 2008;31(5):874-879.

Results – Text message (SMS)

HbA1C in Study Time Intervals: Before, 3 & 6 months After

E-health

“eHealth as Healthcare practice supported by electronic processes and communication”
(2001)

”eHealth as a set of technological themes in health today, more specifically based on commerce, activities, stakeholders, outcomes, locations, or perspectives” (2005)

Della Mea, Vincenzo (2001). [“What is e-Health \(2\): The death of telemedicine?”](#). *Journal of Medical Internet Research*. 3 (2): e22. doi:10.2196/jmir.3.2.e22. PMC 1761900. PMID 11720964. Retrieved 2012-04-15.

Oh, Hans; Rizo, Carlos; Enkin, Murray; Jadad, Alejandro; Powell, John; Pagliari, Claudia (24 February 2005). [“What Is eHealth \(3\): A Systematic Review of Published Definitions”](#). *Journal of Medical Internet Research*. 7 (1): e1. doi:10.2196/jmir.7.1.e1. PMC 1550636. PMID 15829471

Forms of eHealth

- **Electronic health record**: enabling the communication of patient data between different healthcare professionals (GPs, specialists *etc.*);
- **Computerized physician order entry** : a means of requesting diagnostic tests and treatments electronically and receiving the results
- **ePrescribing**: access to prescribing options, printing prescriptions to patients and sometimes electronic transmission of prescriptions from doctors to pharmacists
- **Clinical decision support system**: providing information electronically about protocols and standards for healthcare professionals to use in diagnosing and treating patients
- **Telemedicine**: physical and psychological diagnosis and treatments at a distance, including telemonitoring of patients functions;
- **Consumer health informatics**: use of electronic resources on medical topics by healthy individuals or patients;
- **Health knowledge management**: *e.g.* in an overview of latest medical journals, best practice guidelines or epidemiological tracking (examples include physician resources such as Medscape and MDLinx);

Forms of eHealth

- **Virtual healthcare teams:** consisting of healthcare professionals who collaborate and share information on patients through digital equipment (for transmural care);
- **Medical research using grids:** powerful computing and data management capabilities to handle large amounts of heterogeneous data.
- **Health infomatics/Healthcare information systems:** also often refer to software solutions for appointment scheduling, patient data management, work schedule management and other administrative tasks surrounding health

Social media and health

Advantages

- Overcomes distances
- Overcome language barriers
- Conveys real-time information
- Overcomes patient-provider barriers
- Can expedite the navigation of health services
- Can be cost-effective

Barriers to eHealth

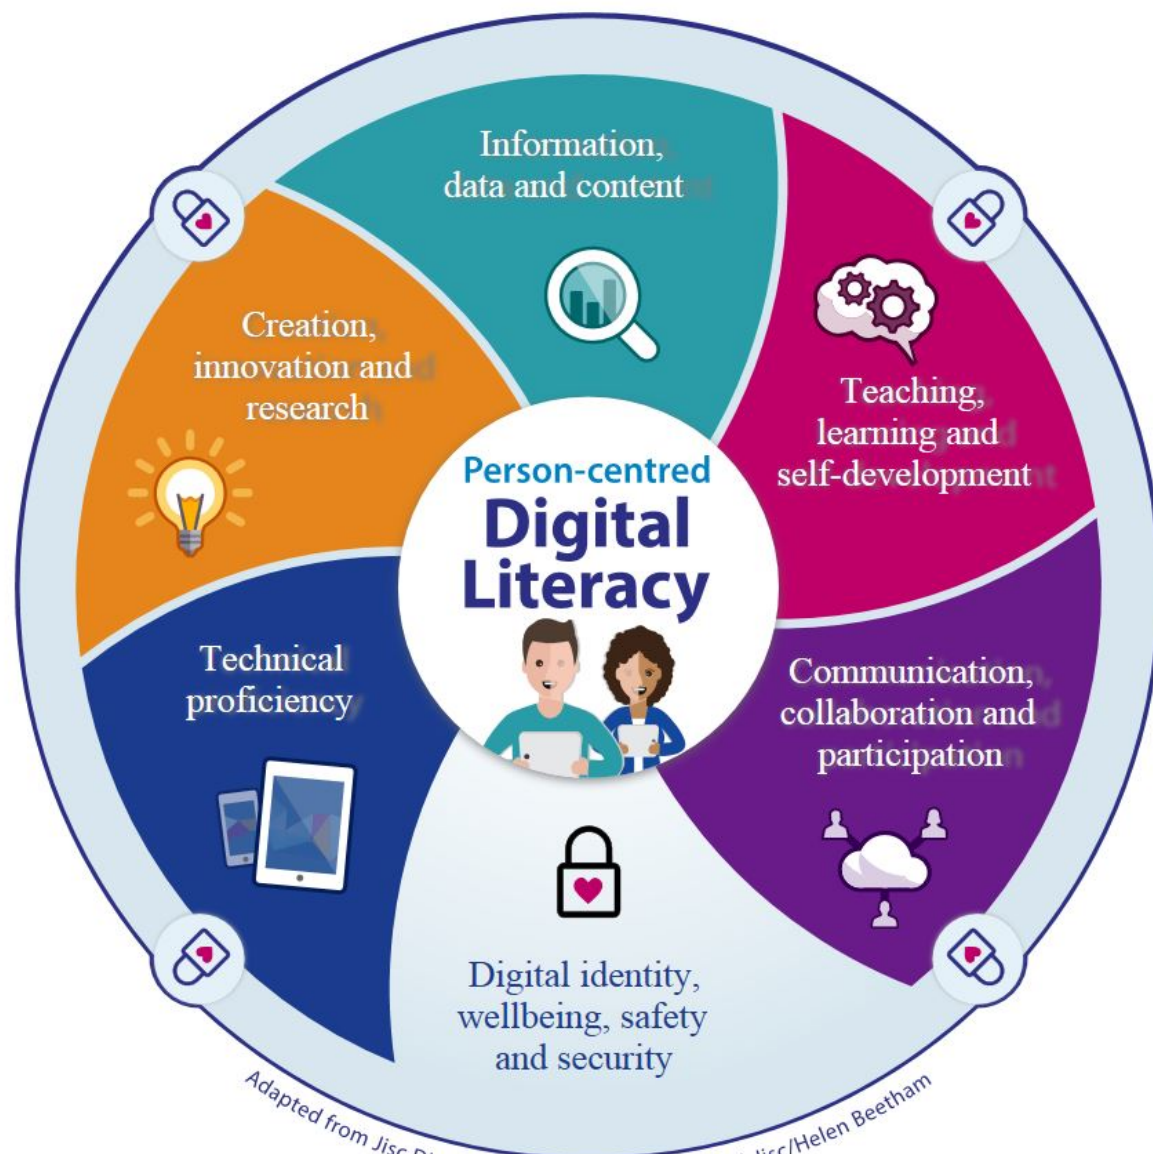

- **Privacy and confidentiality**
- **Credibility**
- **Usability**
- **Accessibility**
- **Common language**

Digital health: heaven or hell?

How technology can drive or derail the quest for efficient, high quality healthcare

Adapted from Jisc Digital Capacity Framework (2015) Jisc/Helen Beetham

eHealth literacy definition

“the ability to seek, find, understand, and appraise health information from electronic sources and apply the knowledge gained to addressing or solving a health problem.”

*Skinner and Norman - J Med Internet Res. 2006 Apr-Jun; 8(2): e9.
Published online 2006 Jun 16.*

Digital Divide or Digital Development?

Health literacy and aging

The sub-age groups among the elderly

- 55 – 70 are considered the “baby boomers”, born after World War II;
- those 70+ have been called the “silent generation”, born between 1925-1945.
- Research indicates that baby boomers are significantly more likely than older adults to use the internet for seeking health information, send e-mails, adopt to automated call centers, text, and utilize telehealth resources in order to receive healthcare (LeRouge et al. 2014).

Health literacy and culture change

Migration/Immigration/Natural change from traditional to Western cultures

Levin-Zamir, D., Leung, A. Y. M., Dodson, S., & Rowlands, G. (2017). Health literacy in selected populations: Individuals, families, and communities from the international and cultural perspective. *Information Services & Use*, 37(2), 131-151

Children/Adolescents as a Social Minority

Health literacy and chronic health conditions

“BYOD Tele-Dermatology” on video: a country-wide reality in Israel

Clalit Health Services, Israel’s leading HMO, is proud today to announce its new country-wide **BYOD Tele-Dermatology Video Service**, our third Tele-Medicine service in 5 years.

Emphasizing Quality of Care, the new service is staffed by board certified dermatologists and supervised and managed by **Clalit’s** top clinicians.

Committed to Equality of Care, we are able to provide equitable and accessible professional care in every household in Israel, from the major urban centers to the most remote parts of the country; all from the comfort of one’s very own home.

Practicing Continuity of Care, our dermatologists are linked to our patients’ central Electronic Medical Record enabling them to see “the complete medical picture” during consultation. Documentation, recommendations and referrals are recorded directly into the patient’s EMR and a patient’s copy is delivered digitally.

Clalit has operated a **Tele-Pediatrics Service** for the past 5 years and a **Tele-Family-Practice** for the past 13 months – both with great success. At present, we provide more than 16,000 e-consultations a month, more than 50% of all contacts are comprised of video consultations.

Clalit’s eHealth wing is a disruption arm of the Community Medicine Division of **Clalit Health Services of Israel**

Innovation and senior adult participation: fall prevention

Defining the problem:

Identifying elders at risk for a second fall

Process:

Focus groups with elders in the community

Developing the solution:

Reluctance to report about a fall

Participatory Innovation

A LITTLE BIT ABOUT

CDI Negev – Centre for Digital Innovation is a first of a kind, non-profit organization dedicated to improving the quality of our lives, by creating innovative solutions having to do with healthy aging and senior citizens.

OUR LIVING LAB

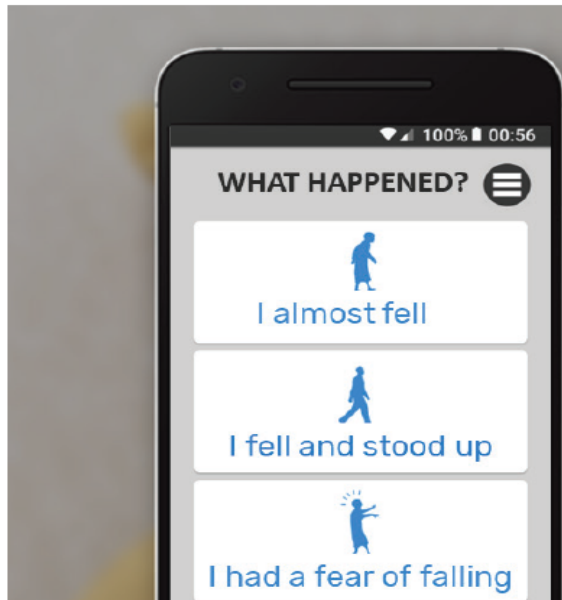

At CDI's Living lab, we enable you to examine your ideas and your solution (product or service) while still in a stage of a prototype, experiment and simulate with it in a fully integrated and practical environment. Thus, allowing you to create revolutionary and holistic custom-made solutions for your needs.

INSPIRE, INNOVATE, IMPLEMENT

ACCESS TO BREAKTHROUGH STUDIES

As a leading partner of CDI's, the Ben Gurion University serves as a source of knowledge and access to ground

The Fall Prevention App

designed to manage silent events by documenting them on a digital diary and to recommend what is best to do to prevent fall.

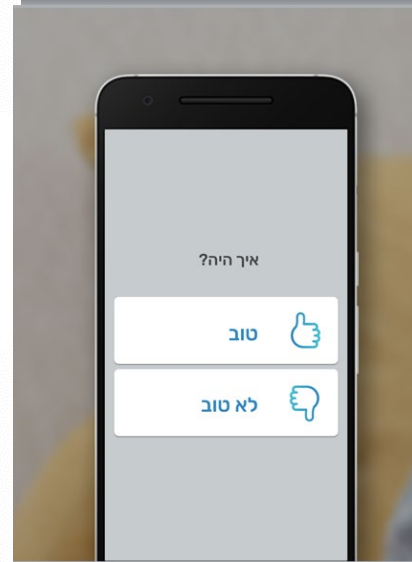

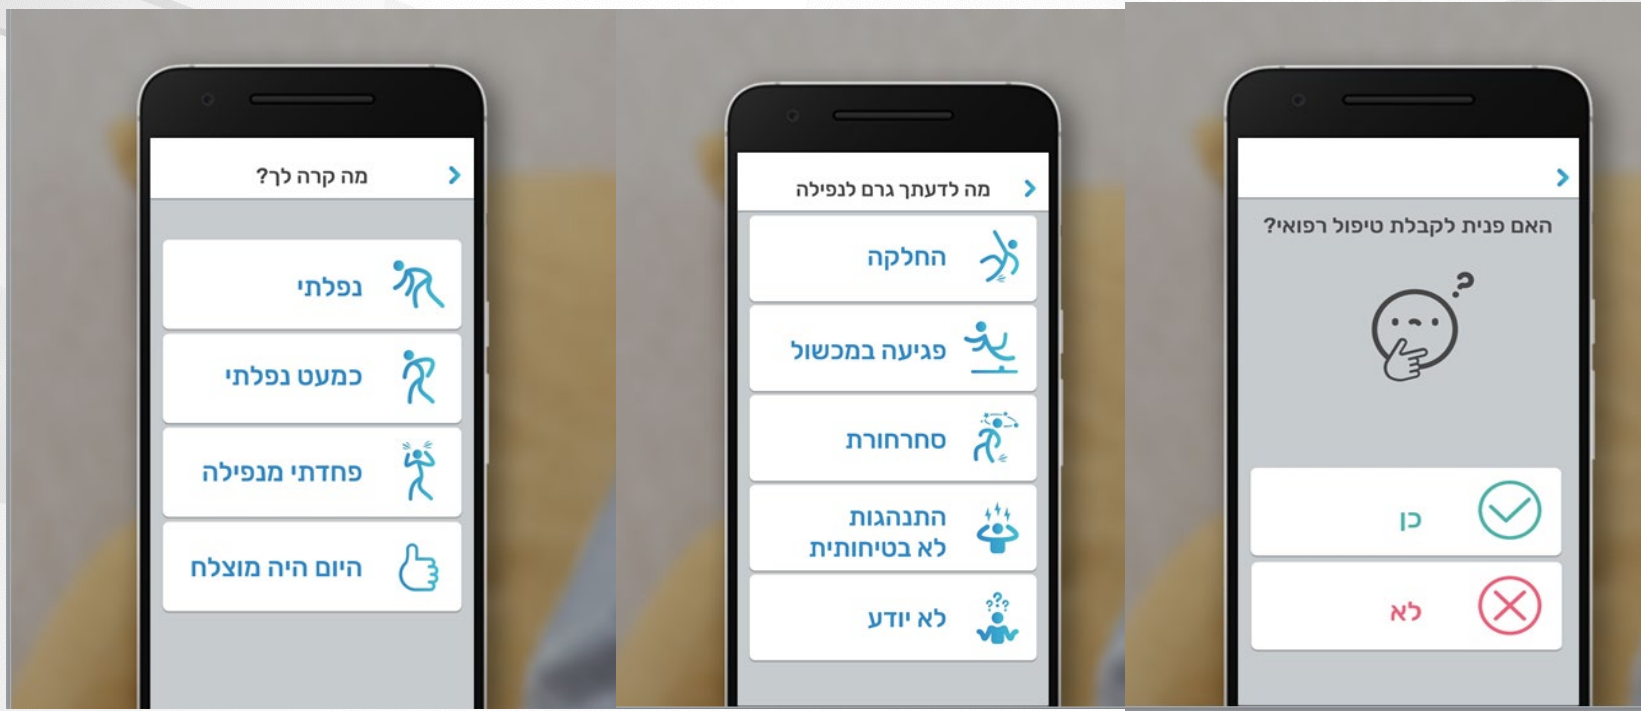

The app aims to increase the elderly know-how and self-responsibility to prevent falls. Knowing what happens and what to do can help to cut down a person's risk of falling.

Falls can be prevented. These are the Apps' recommendations:

1. Talk to Your Doctor, the digital diary will be a useful tool to discuss with the physician about risk evaluation, medicines review, taking vitamin D supplements, or have your eyes checked. The app will suggest the users tests to assess their risk of falling, such as the 4-stage Balance test approved by the CDC and STEADI.

2. Do Strength and Balance Exercises, the app will suggest evidenced-based stability and balance exercises.

3. Make Your Home Safer, the app will suggest a Fall proofing test for the home to make it safer and appropriate.

FACTS

Health Literacy

IUHPE Global Working Group on Health Literacy
Position Statement on Health Literacy: A practical vision for a health literate world

Action Areas

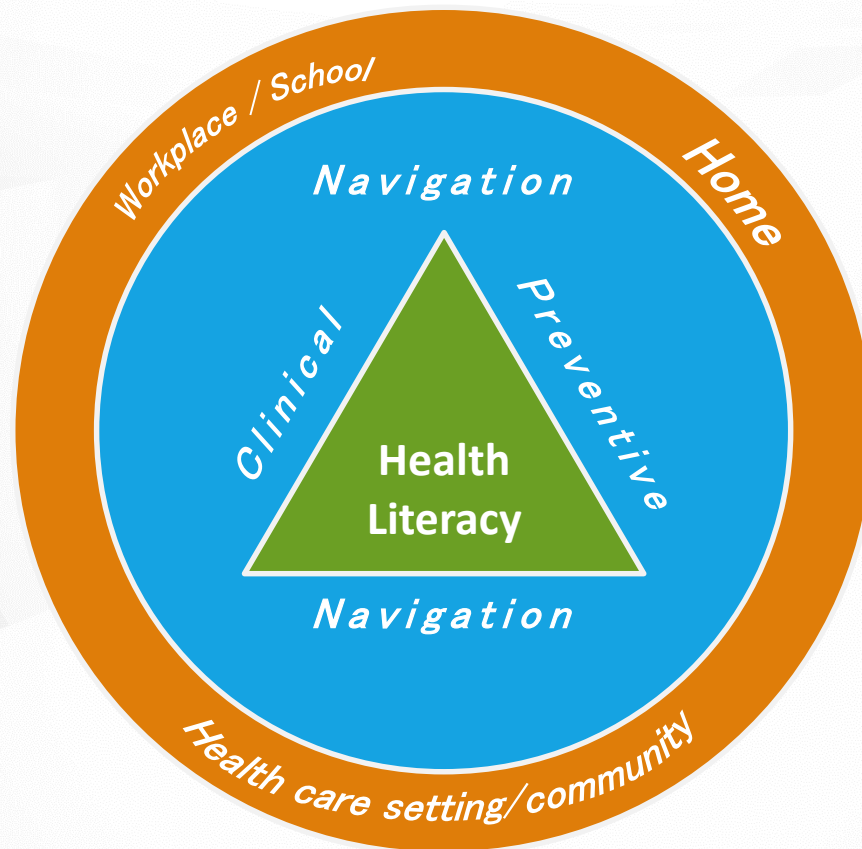

Selected Examples of Policy Initiatives for Promoting Health Literacy

Ultimate action..

Health Literacy in All Policies

Conclusions

- **Leadership and responsibility of the health system are necessary for providing more health literacy resources and cultural appropriate services;**
- **Diversity of opportunities for promoting organizational health literacy, based on the settings approach to health promotion, to plan, implement and evaluate sustainable interventions for promoting health**

Future needs for applied research in practice and intervention

- **Digital health literacy** - How can we promote DHL at the individual and community level, without leaving anyone behind?
- **Critical health literacy** – How can we best develop the “Prosumer” (as opposed to consumer) from an early age?
- **Digital Health Literacy across the lifespan (MPOHL)** - Initiate longitudinal cohort studies to understand if the challenges are generational or cohort
